# Navigating the File System

Reindert-Jan Ekker

@codesensei www.codesensei.nl

## Overview

### Navigating the filesystem

- Current location
- Jump to different locations
- Listing files
- Hidden files

### **Entering commands**

- History
- Completion

## Moving Around

```
# Move to home directory
cd
# Move into a folder
cd Desktop
cd /usr/lib
# Move one level up
```

## Looking Around

```
# Print the path to the current working directory pwd
```

# List contents of a directory
ls

# Editing Commands

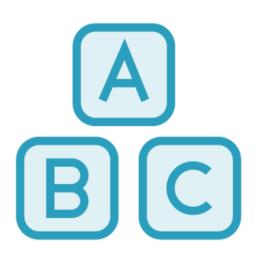

#### **Bash history**

- Up/down arrow recalls commands
- (or Ctrl-p and Ctrl-n)

### **Tab completion**

- Type first part of a filename
- Press tab to have it completed

## Anatomy of a Command

#### Words separated by spaces

- First word: the command to run
- Other words: arguments

cd Downloads

## Options are arguments starting with -

- Change behaviour of the command

## Options: Examples

```
# List all files (including hidden)
ls -a
# List in long format
ls -1
# All files, in long format
ls -a -1
ls -la
# After options: a filename argument
ls -la Downloads
```

## Getting Help

#### Command: man

- man Is
- man cd
- man man

#### **User Interface**

- Spacebar: down a page
- b: move up a page
- /: search
- n: next match
- q: quit
